

Yurchenko springboard surround - FIG spec

Details

PVC covered foam safety collar to fit around competition springboards

This extended version of our standard Yurchenko surround has the following features to comply with the current FIG requirements:

- full length of the springboard - 1.4m - with tapered edges
- 200mm wide all around
- incorporates an air gap between the springboard and the inside edge of the surround to permit air to escape to ensure the surround does not impact the performance of the springboard
