

Fixed mesh storage cage

Details

Continental are pleased to offer a bespoke design, manufacture and installation service of storage cages for sports equipment.

These cages can include walls, roofs, single or double doors and other features to suit your requirements. They can be installed as empty areas or we can include shelving, bins, dividers or other items to suit your exact needs.

We use fully welded metal mesh panels with strong durable square section tube sides, all epoxy powder coated in a range of colours. The panels are fixed securely to each other and we fix the cage securely to the walls and floor of your storeroom for additional security. Doors can be held secure by padlocks.

The price depends on the size and specification of your cage. Please contact us with a sketch of your room showing dimensions and a digital photograph of it, then please detail what cage you want and where you want it in the room along with your exact requirements and we will be pleased to quote accordingly.
