

Padded seating

Details

We manufacture our padded seating units to suit your space and requirements.

A robust timber framework is encased in plywood onto which removable padded panels are held in place using VELCRO®

The padded panels are removable for easy cleaning or replacement

Panels are available in 22 colours of PVC and sides, ends and top can be any combination of the same or different colours.

As well as standard rectangular units we can manufacture bespoke units such as tiered seating and corner seating (see images above) to suit your facility and requirements.
