

Basketball goals - Practice - Fixed projection

Details

Continental's fixed projection practice basketball goals are included in most sports halls and activity rooms. The goals are wall mounted onto hardwood timber bearers bolted to the wall (if being fixed to blockwork) or directly mounted onto secondary support steelwork. We manufacture standard bracketry, but bespoke bracketry can be made to suit the individual circumstances in your facility and the location of potential fixing points or secondary support steelwork

[Technical Information](#)

These goals are available in any projection from flat fixed up to 1.2m. Typical projections are:

- flat fixed on timber bearers
- 450mm
- 600mm
- 1.2m

Please note that some local councils have banned flat fixed goals due to the risk of injury from people running into the wall whilst playing mini games. We therefore recommend a minimum projection of 450mm is specified - which is our most popular projection.

Options include:

- Fixed height or height adjustable - Fixed height or hydraulically assisted height adjustable boards are available. Adjustable height boards are suitable to provide junior or mini basketball as well as senior basketball - ring heights achieved by adjustable height goals are 3.05m and 2.6m.
- Practice backboards are 1.2m x 0.9m and are laminated timber as standard but are available in cast acrylic (our acrylic is 100% recycled content with no virgin plastic).
- Backboard padding is available as an optional upgrade - the same TuffGuard bolt-on backboard padding as our matchplay goals, but in practice size 1.2m wide
