

Netball posts - competition - socketed

Details

Continental's hi-level England Netball compliant competition indoor netball posts. These posts have been used for numerous Superleague and International netball matches

These posts are the preferred style for higher level play - socketed - but are also available in an alternative floor anchored version for facilities where deep sockets cannot be installed.

These posts are fully compliant to the England Netball specifications (when used with the optional post padding) for all standards of play and incorporate:

- 80mm diameter steel uprights
- 15mm diameter solid steel rings
- heavy duty nets
- easy height adjustment to achieve junior, intermediate and senior competition ring heights

As standard the posts are epoxy powder coated in red and the rings are epoxy powder coated in white.

These posts require deep sockets set into the sub-floor and removable bushing covers in the sports flooring to provide access to the sockets. Please contact us for further information.
