

Netball posts - competition - floor anchored

Details

Continental's England Netball compliant competition indoor netball posts are suitable for all but International level play. Our socketed version is preferred by the governing body of netball for county level play and upwards, but if your facility cannot have the necessary deep sockets, then these posts are fully compliant up to International play.

These posts are fully compliant to the England Netball specifications (when used with the optional post padding) for all standards of play and incorporate:

- 80mm diameter steel uprights
- 15mm diameter solid steel rings
- heavy duty nets
- non-marking wheels to assist with transport to and from storage
- easy height adjustment to achieve junior, intermediate and senior competition ring heights

As standard these posts are epoxy powder coated in red and the rings are epoxy powder coated in white.

These posts must be floor anchored when in use. Each post requires two anchors. The anchor type and cost of installation depends on your floor type. Please contact us for further information.
