

## Deluxe cushioned beam pad

### Details

This deluxe beam training pad features 10mm thick lightweight highly resilient foam on the top and both sides.

The sides and reverse are covered in high-strength red pvc, with the top being covered in a layer of FIG approved beam suedette.

The pad is fixed to the beam using velcro on the underside with quick-release flaps to enable the pad to be removed and replaced easily between gymnasts. The VELCRO® Fastener flap incorporates cut-outs to allow it to accommodate the legs of the Continental FIG approved competition beam.

The deluxe cushioned beam pad is 1m long.
