

SPIETH - Springboard "Skippy"

Details

The SPIETH "Skippy" is an increased height training springboard which has a leading edge at 33cm above the floor to provide more confidence, a softer impact and additional rebound.

An ideal methodic learning board with an ergonomic shape for learning the correct vaulting stance, this board provides extra bounce at a lower initial vaulting force.

The raised springboard is intended to create a longer flight moment to give more basic height for more confidence.

The springboard has removable transport castors to make it easier to move to and from storage.

The spring is provided by chrome silicon steel springs.

The board is designed for primary school and methodic training of gymnastics whose vaulting experience is limited or who are training under supervision.

Aimed at users up to 40kg.

Dimensions: 120x60x33cm

Thickness of top: 10mm
