

T-base above ground volleyball post socket

Details

T-bases provide an "above ground" socket for SRX volleyball posts in situations where the floor slab cannot accommodate a deep socket.

A traditional gamespost anchor is required to be set into the slab to secure each T-base against the floor - this is available at additional cost and may require a bushing cover to be set in the floor above that anchor.

Sold individually, so two T-bases are needed for a pair of SRX volleyball posts.
