

Schelde Superstar

Details

Available in a 3-bay or 4-bay variation, this frame is electrically hoisted above the floor into the stored position meaning it can be installed in a sports hall and maintain the Sport England guidance of ensuring there are no protrusions on the walls below 2m.

A combination of the hoisting straps and wheels enable the frame to be used with the top approximately 1m from the wall and at almost any angle from the vertical.

When used with an optional parallel bar it can be used in a horizontal position to create a useful platform for gymnastic activities.

PLEASE NOTE: To enable this frame to be installed safely in a sports hall, builders work is necessary to create recessed channels for the frame to run up and down inside - please see the images.
