

Spectator seating

33660SSXAA

Details

Transportable and stackable spectator seating from Continental - is a great addition to your sports hall or leisure centre. Spectator seating can be notoriously difficult to set out and takes a huge amount of precious storage space. The answer to your problem is these new units from Continental that are wheel-away and stackable to minimise storage space.

The seating units are available in two types:

- Indoor - with powder coated steel frames and lacquered timber seats, foot-rests and steps
- Outdoor - with fully galvanised steel frames and anti-slip phenolic coated plywood seats, foot-rests and steps

Indoor units are available powder coated in our standard range of colours and extended range subject to availability. See the [powder coating colour chart](#) here

Each unit features a removable back-rest and a set of side frames.

Full sets comprise one each "Large", "Medium" and "Small" size with a step unit. "Small" stacks into "Medium" and "Medium" stacks into "Large". And the steps stack into any of the units.

A full set of 3 seating units and 1 step unit provides seating for approximately 54 people:

- Large - up to 18 people
- Medium - up to 18 people
- Small - up to 15 people
- Steps - up to 3 people (there is a seat and backrest on the top row of the steps unit)

The seating system can easily be erected and dismantled by one or two people. The units are designed to fit through double sports hall doors.

The units should not be transported whilst stacked, but transported individually and then stacked for storage.

Each element features integral drop leg pins fixed to the units on chains to enable the units to be fastened securely together when in place.

We assume that each unit you order will be set out as one long run and we therefore include only two side rails. Should you want the additional flexibility of other arrangements please order additional side rails.

PLEASE NOTE: We recommend that outdoor units that are left unused for periods of time are stacked and covered using the PVC cover which is available at additional cost to protect them from long periods of bad weather.
