

## Curved rebound screens

### Details

These curved rebound screen sections are perfect for roller hockey rinks to enable compliance with the recommended court shape so that the puck does not get trapped in a 90 degree corner

Manufactured in the same way as our standard rebound screens but curved to form a 2.3m radius, each 90 degree corner section is comprised of 2 boards with an intermediate post.

The boards are removable and are hung on removable posts in exactly the same way as our straight sports hall rebound boards.
