

Global Airtrack - HOME

24PER2427H

Details

All models of the HOME Global Airtrack are manufactured with a double-wall fabric to give a durable track with excellent rebound. This technology gives an even surface and consistent pressure without constant air supply.

The Global Airtracks feature:

- Extra reinforcement on all corners, top and bottom
- Soft VELCRO® fixed to all sides to allow multiple tracks to be used to form longer tracks or areas using a VELCRO® fastener.
- Strong handles on both sides of the Airtrack make handling and moving the track easy. The handles are self-coloured to complement the track
- The 10cm and 15cm tracks have two valves - one for air supply and one for a pressure guage (not supplied).

Length

The HOME models of the Global Airtrack are available in three lengths:

- 3m
- 4m
- 6m

The shortest 3m models are easy to carry - for example to take to friend's houses, your gym, or school. Children seeking to play or learn basic skills will find a 3m track suitable. For children / gymnasts wanting to link moves, the 4m or 6m track will be preferable

Depth

The HOME models are available in two thicknesses:

- Global Airtrack HOME - 10cm

Younger children will have great fun tumbling, playing and training motor skills on this track. Older children who do gymnastics at beginner level can also easily train on this track

- Global Airtrack HOME - 15cm

This track is ideal for older children who jump at a slightly higher level and want a powerful rebound from the track

Width

The HOME tracks are available in two widths:

- 3m long tracks are 1m wide
- 4m & 6m long tracks are 1.5m wide

Colours

Two colour options are available:

- Grey top, blue sides & centreline
- Grey top, black sides & centreline

PLEASE NOTE: The Global Airtracks are not supplied with a blower which must be purchased separately. You can use either the Hitachi blower or the Elephant blower shown to the right. We recommend the Elephant blower for the HOME version of the Global Airtrack as it works at higher pressure than the Hitachi blower and a higher pressure is preferable for the thinner tracks
