

Badminton posts. Competition. Socketed

Details

Our competition socketed badminton posts are ideal for any level of facility - they are fully compliant with BS EN 1509:2008 and Badminton World Federation regulations and are the only socketed badminton posts in the world approved by the BWF for international play. Certificate details available here: www.bwfbadminton.org

The posts feature:

- sockets located under the side lines of the court to permit full compliance with BS EN 1509:2008 which requires no part of the post to be in the court
- 40mm x 40mm steel construction
- epoxy powder coated in red as standard - available in other colours on special order
- an integral steel top section with groove for net location - (no moving or plastic parts which can break!)
- net is tensioned correctly using the quick-release clam cleats located on both posts with additional tie-off cleats for the headline.
- rules of the Badminton World Federation require there to be no gaps between the net and posts. Our posts have integral metal net hooks to hold the net against the post - (no loose VELCRO® fasteners to lose!)
- supplied with a competition level badminton net and a net storage envelope. The storage envelope is manufactured from PVC with a VELCRO® fastener and nylon strap with eyelet to enable it to be attached to the post when in storage. This envelope helps protect the net from snagging and tangling when in storage.

We offer a storage base (at additional cost) which holds four or five pairs of posts in your store room to suit a four or five court hall.

The price shown above is for one pair of posts, competition net and net storage envelope. Sockets are available at additional cost and can be supplied for you to self-install or on a supply and installation basis to be installed by Continental's technicians. Please order sockets to suit the quantity of posts you require separately.

The sockets require professional installation and you may need removable bushing covers to be installed above the sockets depending on your floor type - we will call you to discuss the requirements on receipt of your order.

Please note: unlike some other socketed posts, the sockets on our competition posts only require setting into concrete 130mm thick which means they can be accommodated in most new and existing sports facilities.
