

Bar pad with strap handle

Details

Bar pad protection device for asymmetric bar, high bar and parallel bars.

PVC covered pre-formed covered in red PVC with a nylon webbing handle at one end.

The pad has a full-length channel to allow it to fit snugly over the bar but to permit quick-release.

The nylon webbing strap handle allows the coach to remove the pad quickly, immediately after the move being trained so that the rest of the routine can be continued without the pad in place.
