

Parallel bars - standard model

Details

Ref. 251A standard parallel bars with timber rails

Incorporating a simple height and width adjustment mechanism and plywood rails

Heavy cast supports on a box section base give a high degree of stability

These bars are identical to our FIG approved bars, but the rails have steel rather than fibreglass reinforcement and are straight rather than slightly raised to their centres.

These parallel bars can also be supplied in a special inverted leg version suitable for dismount to a pit.
