Wall fixed ladder for bridging

Details

In order for additional linking and bridging equipment (see below) to be used with a wall hinged climbing frame, a wall fixed ladder is required. This is highly recommended as it enormously increases the activities that can take place on the frame.

This item can be installed at the same time as the climbing frame or at a later date. However, if installed at a later date, an additional site visit charge will be payable.

This ladder requires floor fixings and provision will be necessary if there is underfloor heating in place.
