Origin cycle computer

Details

The Origin Indoor Cycle Computer is designed to give users (on their own or in a class setting) the feedback they need to maximise their performance.

The simply designed computer console attaches to the handlebars of any indoor cycle and wirelessly connects to a sensor attached to the crank. The screen gives clear readouts which include:

- distance
- speed
- cadence (RPM)
- heart rate
- time elapsed
- calories burned

For heart rate feedback, a compatible heart rate strap must be purchased separately and worn by the user.

Features:

- Connects wirelessly to sensor which attaches to the cranks.
- Large LCD Display
- Feedback on: calories, RPM, time, distance, speed
- Heart rate feedback (requires 2.4gz ant+ heart rate strap)
- Back-light lights up screen to show information in poor lighting
