

Global Airtrack - CLUB

24PER2727C

Details

The Global Airtrack CLUB can be used by just about anyone, but is ideal for older children and junior gymnasts who jump at a higher level.

The CLUB model has a thickness of 200mm to allow larger and stronger gymnasts to use the track. CLUB models are therefore great for gymnastics clubs and schools.

All models of the CLUB Global Airtrack are manufactured with a double-wall fabric to give a durable track with excellent rebound. This technology gives an even surface and consistent pressure without constant air supply.

The Global Airtracks feature:

- Extra reinforcement on all corners, top and bottom
- Soft VELCRO® fixed to all sides to allow multiple tracks to be used to form longer tracks or areas using a VELCRO® fastener.
- Strong handles on both sides of the Airtrack make handling and moving the track easy. The handles are self-coloured to complement the track
- Three different valve systems to enable use with most blower inflators

Length

The CLUB model of the Global Airtrack is available in five lengths

- 4m
- 6m
- 8m
- 10m
- 12m

Depending on the length of the track and the ability of the gymnast, almost any jumps are possible. Standing jumps can be trained, for example backflips, or single jumps such as cartwheels. The track has a strong

rebound making it ideal for combination jumps. On a 4m track you can typically perform 2 or 3 consecutive jumps.

Depth

The CLUB model airtracks are all 200mm thick

Width

The CLUB models airtracks are all 2m wide to provide a good level of safety for combination and higher level jumps

Colours

The CLUB model airtracks are all supplied with a BLUE top with GREY sides and centreline

PLEASE NOTE: The Global Airtracks are not supplied with a blower which must be purchased separately. You can use either the Hitachi blower or the Elephant blower shown to the right
