FIXED HEIGHT, FIXED PROJECTION PRACTICE BASKETBALL GOALS

OPERATION

These goals have no moving parts and are ready for use once installed with no user adjustment necessary or possible.

These goals are designed for shooting practice and not slam-dunks (where the user grabs the ring and hangs from it with their bodyweight – such activity is misuse)

MAINTENANCE

All sports and PE equipment should be inspected and maintained at least annually by a suitably qualified person.

The net should be checked to ensure it remains attached to the net-hooks – a net that is hanging loose from the net hooks provides additional risk of finger injury.

The fixings of the ring to the board and bracketry to the wall should be inspected as part of the regular inspection and maintenance program.
