MATS

SAFETY MATS

1. It is imperative that when safety mats are used, they are used as an aid to normal landing mats and are placed or secured in such a way so as to prevent the mat from slipping when in use
2. Mats should be handled with care to avoid damage – the carrying straps are designed for carrying by two people, not for pulling the mat by one person
3. Safety mats should be carried by two people (and not dragged along the floor) and should be transported and stored using suitable mat trolleys.
4. Do not drag or fold mats as this causes excessive wear – check them regularly for any damage or tears.
5. Mats should be cleaned regularly with mild detergent and a damp cloth to maintain their performance.

MATS WITH A CARPET SURFACE

1. Store flat whenever possible
2. If rolling the mat for storage, the mat **MUST** be rolled with the carpet surface **OUTSIDE**
 - a. failure to do this may result in de-lamination of the surface of the mat which will invalidate your warranty. We recommend purchasing storage creels from Continental for rollable mats that are stored regularly while rolled-up.
3. Should the latex base of your mat (if applicable) gather dirt the anti-slip qualities will be impaired - to restore wipe with a damp cloth to remove any dust.

LYTAMATS AND POLYBLEND MATS

1. If space is limited these mats may be stored in a vertical mat trolley
2. Should the latex base of your mat gather dirt the anti-slip qualities will be lessened
3. To restore wipe with a damp cloth to remove the dirt

WALL AND COLUMN PADDING

1. Padding may be cleaned with a mild detergent and damp cloth
